

Beginner's Guide

Step 1: Get your crypto exchange account ready

1. Create your exchange account
2. Deposit money into Bybit and buy USDT

Step 2: How to make money with whale alerts?

3. How to Follow Telegram/Discord Alerts
4. How to follow the whale signals on Bybit
5. Adjusting Leverage Mode
6. How much of the balance to invest in each trade?
7. How much leverage to use?
8. How to Increase Position Size
9. How to Close Positions (Partially or Fully)

Step 1: Get your crypto exchange account ready

1. Create your exchange account

ByBit is the safest and the best cryptocurrency exchange.

Create an account using this link for extra rewards on your deposit:

<https://www.bybit.com/invite?ref=Q7LVOY>

Download the ByBit app on your phone for easier trading.

2. Deposit money into Bybit and buy USDT

Detailed Guide: <https://learn.bybit.com/bybit-guide/make-a-deposit/>

You need USDT to trade crypto futures. Futures means trading cryptocurrencies with leverage.

If you don't know about leverage trading, I highly suggest you read this article, it will teach you a lot: <https://learn.bybit.com/trading/what-is-leverage-in-crypto-trading/>

<https://learn.bybit.com/trading/what-is-leverage-in-crypto-trading/>

After you buy USDT, transfer it from funding/spot to the derivatives account. USDT needs to be ready in your derivatives account for you to enter a trade when a new trading signal (BUY/SELL) arrives.

Step 2: How to make money with whale alerts?

Our system delivers alerts when a whale in the cryptocurrency market makes a new trade. A crypto whale is a trader who is consistently making money in the crypto market by winning trades. Some of these whales have more than 95% win rates. They are literally printing money.

To make money like them, all you need to do is take the same trade. The alerts let you know exactly when to buy and sell. You just need to copy whatever the whale is doing.

How to Follow Telegram/Discord Alerts

You will get alerts in Discord/Telegram when the following events happen:

- The whale **opens a new trade** (e.g. **Opening 20x SHORT position on XRP at 0.5400**)
- The whale **“increases position size”** (e.g. **SHORTing 98% more XRP here at 0.5508**)
 - This means the trader is shorting more at a higher price, increasing the average entry price of the trade. Our system lets you know exactly how much he is increasing his position size, so you can just do the same. In above example, let’s say the trader shorted XRP with \$100 balance, SHORTing 98% more means sorting the same amount again, increasing the position size to \$200.
- The whale **takes profit** (e.g. **Closed 52% of XRP SHORT at 0.5255**)
 - Here the whale closed half of his position. Leaving the other half open for more profits.
- The whale **closes position** (e.g. **Closed 20x XRP SHORT at 0.5324**)
 - *Closing the position fully.*

Normally you would have to either make your own technical analysis before taking trades, or copy the trade of an influencer or trader on Twitter/Telegram. These people mostly hide their losses, and use you for engagement farming. They are not even traders most of the time. They make their money with the referral links. Using Whale Vision, you know for sure that you are following a proven winner, with transparent win/loss statistics.

How to follow the whale signals on Bybit:

1. Open Bybit app and search the pair of the trade, and find PAIRUSDT derivatives market.

2. After you enter the market screen:

1. click **LONG** or **SHORT** based on the trade direction.
2. choose **MARKET** order (this order type immediately buys/sells, in order to follow our whale signals as soon as they arrive)
3. Use the slider to adjust how much of your balance you want to invest
4. Click Buy / Long or Sell / Short to open the trade.

3. Adjusting Leverage Mode **IMPORTANT!**

Isolated Leverage Mode: In this mode, each trade involving a different coin is treated separately. You borrow money for each trade, and if a trade fails, only the funds tied to that specific trade are at risk of being lost.

Cross Leverage Mode: Here, all your trades are linked together. If one trade goes bad, it can affect your entire account balance, risking total liquidation if losses are significant.

Some whales use cross leverage. This means their positions do not automatically close when -100% losses are reached. Since they have available account balance (e.g. 100 USDT in a trade, but 3000 available balance.), they do not get liquidated. If you are a beginner, using low leverage with isolated leverage mode is recommended.

If you'd like to understand this better, check out this very helpful article: <https://academy.binance.com/en/articles/what-are-isolated-margin-and-cross-margin-in-crypto-trading>

4. How much of the balance to invest in each trade? **IMPORTANT!**

- You can invest 5 to 10% of your portfolio in each trade, depending on your risk preference and trading style. Our system delivers many signals from multiple whales. Our recommendation is to stick to 1 or 2 whales, and mute the channels for the other whales, so you don't get distracted.
- Different whales have different trading styles. **Go through previous messages to see how they are managing their trades.** This will be very valuable to teach you how to trade like a whale!
- Do not go all in on the trade. Whales sometimes increase their position size to change the average entry. You must have available balance to add to your positions. Do not go heavy on trades, get used to following the trades first. We will always have lots of winning signals. Take it slow.

5. How much leverage to use? **IMPORTANT!**

We recommend getting started with max 5x leverage, until you get used to following the trades. If you are serious about making money in crypto, do not aim to 10x your money in a week. Real gains are made with patience, discipline, and consistency. Your gains will compound really fast if you keep calm, and not be greedy. Adjust your own risk preference with the leverage. You don't have to use the same leverage as the whale!

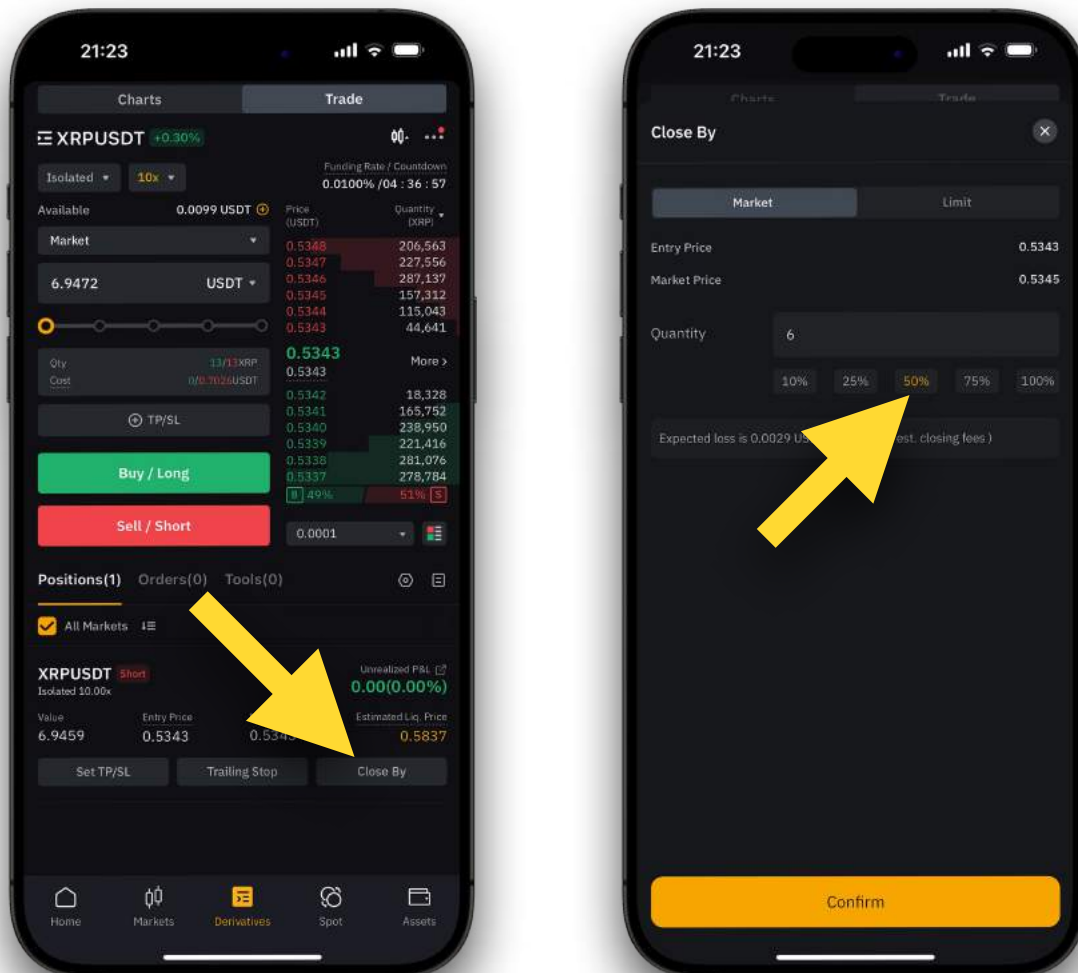

6. How to Increase Position Size (Adding to LONG/SHORT)

Increasing position size means doing the same thing when opening the position. Click **Buy / Long** or **Sell / Short** to open the trade for the quantity you want. To increase your position size, simply repeat the initial steps you took when opening the position. Click **'Buy/Long'** or **'Sell/Short'** to open the trade for the desired quantity.

7. How to Close Positions (Partially or Fully)

1. Click **Close By** on the trade you want to close
2. Use the buttons to quickly select a certain percentage of the position you want to close, or manually input the quantity after checking your total position quantity in your positions view.

Partial closing means you are taking profits/losses. Fully closing the position means you are exiting the position and finalizing the trade.
